

Guidance on use of Generative AI Tools for IDCC27 Authors and Reviewers

This guidance is based on:

Lin, Z. (2024). Towards an AI policy framework in scholarly publishing, *Trends in Cognitive Sciences*, 28(2), 85-88. <https://doi.org/10.1016/j.tics.2023.12.002>

Definition

Generative AI is a type of artificial intelligence technology that can produce various types of content including text, imagery, audio and synthetic data.

Elsevier (n.d.) *Publishing ethics | Elsevier policy*. Retrieved April 29, 2026, from <https://www.elsevier.com/about/policies-and-standards/publishing-ethics>

Guidance for authors

If generative AI was used to develop a submission, or any part of a submission, its use and purpose must be described. Authors should be prepared to provide information on tools used and prompts given to generate content used in their submission.

Authors are responsible and accountable for providing proper scrutiny to AI generated content to avoid inaccuracies and plagiarism. The use of generative AI in creating content does not confer authorship to the tool concerned.

SAGE (2023, January 27). *ChatGPT and Generative AI*. SAGE Publications Inc. <https://us.sagepub.com/en-us/nam/chatgpt-and-generative-ai>

Guidance for reviewers

Reviewers must not upload a submission, or any part of a submission, into generative AI tools. This is based on respect for the confidentiality of personal data and/or proprietary information in a submission, as well as respecting intellectual property rights by preventing them becoming part of training datasets. Furthermore, the review process is a human endeavour and responsibility and accountability for providing a review is with the individual accepting an invitation to review a submission and should not be delegated.
